AI-ASSISTED DESIGN WORKFLOW

Actively integrates AI tools across the design process — including Claude, ChatGPT, and Figma AI — covering discovery, ideation, and prototyping.

Built custom AI workflows using design thinking methodology, cutting research time while maintaining depth. Established clear criteria for where AI accelerates work and where designer judgment remains essential.

- Product Design
- UX/UI Design
- Journey Mapping
- User Research & Usability Testing
- Prototyping
- Design Systems
- Accessibility (WCAG)
- Cross-functional Collaboration
- Design Operations (DesignOps)

LANGUAGES

- Ukrainian — Native
- English — Fluent

EXPERIENCE

Product Designer & Builder — Pagecraft

AI Product • Remote • 2026

Designed and built Pagecraft, an AI product that turns a product into a complete, conversion-ready product page — handling the hard part: the strategy and the writing.

- Designed the end-to-end product — the core workflow, IA, and UI of a multi-step flow (product input → strategy → layout → generated page).
- Built a working MVP (private beta) in Lovable, with the content and writing refined using Claude.
- Tackled the real problem — not assembling a page, but creating one that sells: working out the angle, the emphasis, and the order automatically, so the user doesn't have to.
- Generates a full, conversion-ready page with industry layouts, section-level refinement, and SEO — shipped end to end as a solo designer-builder.

Product Designer — Ubisoft

France / Remote • From April 2022 (4 years)

Product Designer owning end-to-end UX for internal and player-facing tools, including HELP and Bug Reporter systems.

- Own end-to-end design from discovery to launch across HELP and Bug Reporter flows.
- Design complex multi-step reporting journeys with edge-case handling.
- Collaborate cross-functionally with PM, Engineering, QA, and Production.
- Ensure accessibility across products by applying WCAG principles
- Contributed to shared design system components to maintain cross-product consistency.

Achievements

- Reduced invalid or incomplete bug reports by 20% by introducing structured reporting forms.
- Reduced support tickets routed to a specific topic by 17% by integrating AI assistance into the contact flow.
- Improved HELP platform usability and self-service efficiency by redesigning navigation and information architecture.

MARYNA RAK

SENIOR PRODUCT DESIGNER

SaaS platforms • Marketplaces • AI integration

Product Designer — Roots Marketplace

Remote • 2025 – Feb 2026

Lead Product Designer for Roots Marketplace, designing the seller CMS and customer storefront for a marketplace platform.

- Designed a seller CMS for managing product listings, pricing, inventory, and variants.
- Simplified product creation workflows through modular CMS sections.
- Designed the marketplace storefront aligned with CMS product data structures.

Senior UX/UI Designer — Ubisoft

Kyiv, Ukraine • April 2020 – April 2022 (2 years)

Designed internal tools used by marketing, procurement, and production teams to manage requests, approvals, and internal tasks.

- Translated complex internal processes into structured interfaces and clear interaction flows.
- Created wireframes, prototypes, and high-fidelity UI for internal platforms and web tools.
- Applied accessibility principles (WCAG) including contrast, keyboard navigation, and clear interaction states.

Achievements

- Implemented UI components using HTML and CSS for player-facing in-game overlays across platforms including PC, mobile, Xbox, and PlayStation.

UI/UX Designer — Ubisoft

Kyiv, Ukraine • Jun 2019 – Apr 2020 (11 month)

- Designed UI for internal tools and web applications used by internal teams.

Web Designer — LynxSoft

Kyiv, Ukraine • Jun 2017 – Apr 2019

Implemented design using HTML/CSS
